

To do this activity you will need to work as a team and you will be under pressure to complete the task in a set period of time.

You will be video taped whilst you are working as a team.

**There are four steps to the activity.**

1. You need to decide on a leader for your team. You need to think of a reason why that person should be the team leader. You have two minutes to do this.
2. Your task is to build a tower that supports itself using 20 sheets of A4 paper. You will be given some tools to help you do this task: one ruler, one pencil and a stick of glue. The team with the tallest tower that can stand for two minutes will win the challenge. You have 10 minutes to come up with two different plans. One member of your team needs to explain one of your plans to the whole group. The other plan can remain secret.
3. Collect your team paper and tools. You have 15 minutes to build your tower.
4. Measure the height of your tower.
